# ANIKESH KUMAR

Software Engineer — Full-Stack Developer
anikeshkr0001@gmail.com — GitHub — LinkedIn

## PROFESSIONAL SUMMARY

Aspiring Software Engineer with strong foundations in data structures, software development, and scalable system design. Experienced in building secure and high-quality applications using React, Node.js, and Flask. Skilled in writing efficient code, debugging, and applying automation across the Software Development Life Cycle (SDLC). Strong collaborator with ability to analyze data, troubleshoot systems, and deliver reliable solutions.

## CORE COMPETENCIES

Software Development System Design Data Structures Algorithms Debugging API Development SDLC
CI/CD Problem Solving Agile Development Scalable Systems Data Analysis

## EDUCATION

**Bachelor of Computer Science Engineering** 2023 – 2027
Vidyavardhaka College of Engineering, Mysore (CGPA: 9.02/10)

**BS in Data Science and Applications**
Indian Institute of Technology Madras

## TECHNICAL SKILLS

**Programming:** Python, Java, C, TypeScript

**Backend:**
- Flask, Node.js, Express, REST APIs
- Secure coding, API design, SDLC

**Data:**
- NumPy, Pandas, Scikit-learn, Matplotlib
- EDA, Regression, Classification

**Frontend:**
- HTML, CSS, JavaScript, ReactJS

**Database:**
- MongoDB, SQL

**Tools:**
- Git, GitHub, Postman, VS Code
- Jupyter, n8n, CI/CD basics

## ACHIEVEMENTS & CERTIFICATIONS

**Achievements**
- Engineered solutions for 120+ DSA problems, improving algorithmic efficiency
- Applied debugging and troubleshooting techniques to resolve system issues
- Collaborated in team environments contributing to code reviews and development

**Certifications**
- Winner of Hack the Hackers Hackathon – GSSSIETW
- Finalist – National Hackathon (MITS)
- Participant – Smart India Hackathon (SIH)
- BS Data Science Foundation – IIT Madras

## PROJECTS

**Hospital Management System (HMS)** Jan 2026
Engineered a scalable system managing patient records, appointments, and inventory with role-based access control, improving operational efficiency.
Designed modular backend architecture and optimized database queries to ensure secure data handling and faster response times.
**Technologies:** Flask, Python, SQL, REST APIs

**Leet — Online Coding Contest Platform** Feb 2026
Developed a full-stack platform supporting real-time code execution, automated judging, and analytics dashboards. Applied Git-based version control for collaboration and maintainability.
Implemented contest proctoring, cheating detection, and performance tracking features to enhance system reliability and user experience.
**Technologies:** TypeScript, React, Node.js, Supabase

**CargoPro – Smart Logistics App** Dec 2025
Built a logistics application enabling real-time shipment tracking and communication, improving transparency and system usability.
Integrated REST APIs and real-time updates to streamline logistics operations and improve delivery tracking accuracy.
**Technologies:** Flutter, Firebase, REST APIs

**Gmail AI Assistant with n8n Automation** Jul 2025
Automated email categorization and response workflows using AI integration, reducing manual workload and improving efficiency.
Designed workflow automation pipelines to prioritize emails and generate responses, improving productivity and response time.
**Technologies:** n8n, OpenAI API
