ANIKESH KUMAR

Full Stack Developer
anikeshkumar01work@gmail.com | +91-9507071557 | Mysore, India
GitHub | LinkedIn

PROFESSIONAL SUMMARY

Full Stack Developer who enjoys building complete web applications from the database up to the UI. Comfortable working across Python/Flask on the backend and Vue.js on the frontend, with experience in REST APIs, JWT-based authentication, and background job processing using Celery and Redis. Also bring a background in Machine Learning and Data Structures, which helps when a problem needs more than just CRUD. Have shipped and deployed multiple projects end to end, and picked up a few hackathon wins along the way.

EXPERIENCE

Full Stack Developer – Present
DataWeave, Bengaluru, India

- Work on the DSA (Digital Shelf Analytics) platform, contributing to Python backend services that handle data versioning, crawl scheduling, and the pipeline that moves product data from collection through to publishing.
- Investigate production issues raised in Jira by tracing accounts and versions across pipeline stages on internal monitoring dashboards, then narrow down whether the delay sits with the scheduler or a downstream job and write up the findings on the ticket.
- Add automated tests and test stubs for existing modules following the team's conventions, and raise pull requests on Bitbucket that go through peer review before being merged.
- **Technologies:** Python, SQL, RabbitMQ, REST APIs, Redash, Git, Bitbucket, Jira, Linux

EDUCATION

Bachelor of Engineering – Information Science Engineering 2023 – 2027
Vidyavardhaka College of Engineering, Mysore CGPA: 8.96/10

BS in Data Science and Applications
Indian Institute of Technology Madras

TECHNICAL SKILLS

Programming Languages: Python, Java, C, JavaScript
Frontend Development: Vue.js, React (basics), HTML5, CSS3, JavaScript
Backend Development: Flask, Node.js, Express.js, REST API Development, JWT Authentication, Celery, Redis
Databases: SQL, SQLite, SQLAlchemy, MongoDB, Firebase
AI / Machine Learning: Machine Learning, Deep Learning, Computer Vision, NLP, LLM Integration, Regression, Classification
Libraries: NumPy, Pandas, Scikit-learn, OpenCV, Matplotlib
Concepts: Object-Oriented Programming (OOP), Data Structures, Algorithms, Cloud Deployment, Linux
Tools & Platforms: Git, GitHub, Postman, VS Code, Jupyter Notebook, n8n, CI/CD Basics, Agile Methodology

PROJECTS

Placement Portal V2 – College Placement Management System Jun 2026

- Built a placement management platform with separate logins and permissions for students, companies, and admins to handle job postings, applications, and approvals in one place.
- Set up JWT-based authentication and structured the backend into modules so new features could be added without touching unrelated code.
- Added resume uploads, application tracking, and company/job approval flows, and used Celery with Redis to run exports and reminder emails in the background instead of blocking the app.
- **Technologies:** Python, Flask, Vue.js, SQLite, SQLAlchemy, JWT, Redis, Celery

Hospital Management System Jan 2026

- Built a healthcare management app to handle patient records, appointment booking, and admin tasks, with role-based access so staff only see what they need to.
- Wrote the backend REST APIs and database layer, and cleaned up the system architecture along the way to keep response times fast.
- Deployed the application to a live cloud environment (Render), handling environment configuration and production setup.
- **Technologies:** Flask, Python, SQL, REST APIs, Cloud Deployment

Gmail AI Assistant with n8n Automation Jul 2025

- Built an n8n workflow that reads incoming Gmail messages, classifies and prioritizes them using an LLM, and drafts replies automatically.
- Connected the pieces into a working pipeline so repetitive email handling no longer needed manual attention.
- **Technologies:** n8n, OpenAI API, LLM Integration, AI Automation

ACHIEVEMENTS

- Solved 200+ Data Structures and Algorithms problems on coding platforms.
- Built and deployed several full-stack and AI-powered projects outside of coursework.
- Competed in multiple hackathons, building working software under tight deadlines.

CERTIFICATIONS & COMPETITIONS

- Winner – Hack the Hackers Hackathon, GSSSIETW
- 1st Rank – Ai-Thon Global Coding Conquest
- Finalist – National Hackathon, MITS
- Participant – Protothon 2026
- Participant – TRIADA CTF '26
- Participant – National Road Safety Hackathon, IIT Madras
- BS Data Science Foundation Certification – IIT Madras
- Best Co-curricular Award – 5th Semester, Vidyavardhaka College of Engineering (VVCE)
